Education

University of Maryland Aug. 2025 – May 2028
Bachelor of Science in Computer Science and Engineering (AI/ML track) *College Park, MD*

Experience

Project Lead — Booz Allen Hamilton Aug. 2026 – Present
UMD App Dev Club

- Lead a team of 15 engineers to build an AI driven DevOps monitoring framework built on DataDog, defining asset metrics, alert thresholds, and real time and trend based monitoring to catch infrastructure issues.
- Architect a multi agent AI system that diagnoses root causes, recommends remediation steps, and automates ticketing and configuration changes across AWS infrastructure, before they cause downtime.
- Build AI chatbots that summarize ecosystem health, forecast future issues from trending data such as flagging a server on pace to run out of disk space, and translate triggered alerts into guided next steps for the BAH team.

Undergraduate AI/ML Research Assistant Aug. 2026 – Present
University of Maryland

- Study mathematical and statistical principles in approximation, optimization, and generalization theory to build foundational understanding for a framework aimed at making deep learning based regression and PDE solvers more interpretable and reliable under Professor Yang.

AI Solution Engineering Intern May 2026 – Aug. 2026
Nokia

- Designed AI/ML proof of concept solutions from scratch for Nokia's Product Security team, deploying them as independent microservices and collaborating with architects to shape problem statements into working prototypes.
- Built an LLM based vulnerability classifier that reads unstructured vulnerability descriptions and automatically sorts them by severity, type, and relevance, making it faster to triage a backlog of vulnerabilities.

Frontend Engineer & PM — Exiger Aug. 2025 – May 2026
UMD App Dev Club

- Developed a supplier risk management portal to calculate AI powered supplier & compliance TPRM for each client based on purchase orders, payment and credit history, and compliance posture.
- Led system and schema design to implement Okta backed two factor authentication and a company scoped registration flow, securing access across the frontend and backend.
- Built out the frontend for the Exiger Supplier Portal which includes the Product Catalog, Orders, Work, and Messaging tabs, giving suppliers a catalog with searchable, color coded risk scores per part, a task and questionnaire workspace for compliance work, and in app messaging and order tracking.

Projects

ADC People Portal | *Node.js, Express, LowDB, React, Vite, Tailwind*

- Contributed across the full stack to the ADC People Portal, an internal platform used by 700+ App Dev Club members and applicants to manage recruitment, onboarding, and team operations.
- Built recruitment and applicant tracking features, including role posting, a Kanban style application pipeline, and collaborative review tools for evaluating candidates across teams.
- Integrated the platform with GitHub and Slack to support source control access and automated team communication as part of the onboarding workflow.
- Worked within a structured team hierarchy of Main Teams and Subteams, supporting features for team creation, permissions, and member management used across dozens of App Dev Club project teams.

Technical Skills, Awards, & Activities

Languages: Java, JavaScript, TypeScript, Python, SQL, HTML/CSS, C/C++
Frameworks: React, Spring Boot, Node.js, Express.js, Django, Tailwind
AI & Cloud: LLM APIs (OpenAI, Anthropic), prompt design, multi agent systems, AWS, Azure, Datadog
Developer Tools: Git/GitHub, Docker, Okta, VS Code, PyCharm, Eclipse, Figma
Activities: Math 141 Teaching Assistant, Social Media Director — UMD App Dev Club, PR Team — Maryland Mayuri
Awards: 5th ICDC DECA, 3rd SCDC DECA, 1st NorCal DECA, 2x AIME Qualifier, 2x AP Scholar with Distinction
